QUESTION 1

=====

QUESTION:

A company makes forecasts each quarter to decide how to optimize operations to meet expected demand. The company uses ML models to make these forecasts. An AI practitioner is writing a report about the trained ML models to provide transparency and explainability to company stakeholders. What should the AI practitioner include in the report to meet the transparency and explainability requirements?

OPTIONS:

- A. Code for model training
- B. Partial dependence plots (PDPs)
- C. Sample data for training
- D. Model convergence tables

ANSWER:

B

Partial dependence plots (PDPs)

CONFIDENCE: high

QUESTION 2

=====

QUESTION:

A law firm wants to build an AI application by using large language models (LLMs). The application will read legal documents and extract key points from the documents. Which solution meets these requirements?

OPTIONS:

- A. Build an automatic named entity recognition system.
- B. Create a recommendation engine.
- C. Develop a summarization chatbot.
- D. Develop a multi-language translation system.

ANSWER:

C

Develop a summarization chatbot.

CONFIDENCE: high

QUESTION 3

=====

QUESTION:

A company wants to classify human genes into 20 categories based on gene characteristics. The company needs an ML algorithm to document how the inner mechanism of the model affects the output.
Which ML algorithm meets these requirements?

OPTIONS:

- A. Decision trees
- B. Linear regression
- C. Logistic regression
- D. Neural networks

ANSWER:

A

Decision trees

=====
QUESTION 4
=====

QUESTION:

A company has built an image classification model to predict plant diseases from photos of plant leaves. The company wants to evaluate how many images the model classified correctly.
Which evaluation metric should the company use to measure the model's performance?

OPTIONS:

- A. R-squared score
- B. Accuracy
- C. Root mean squared error (RMSE)
- D. Learning rate

ANSWER:

B

Accuracy

CONFIDENCE: medium

=====
QUESTION 5
=====

QUESTION:

A company is using a pre-trained large language model (LLM) to build a chatbot for product recommendations. The company needs the LLM outputs to be short and written in a specific language.
Which solution will align the LLM response quality with the company's expectations?

OPTIONS:

- A. Adjust the prompt.
- B. Choose an LLM of a different size.
- C. Increase the temperature.
- D. Increase the Top K value.

ANSWER:

A

Adjust the prompt.

CONFIDENCE: high

QUESTION 6

=====

QUESTION:

A company uses Amazon SageMaker for its ML pipeline in a production environment. The company has large input data sizes up to 1 GB and processing times up to 1 hour. The company needs near real-time latency. Which SageMaker inference option meets these requirements?

OPTIONS:

- A. Real-time inference
- B. Serverless inference
- C. Asynchronous inference
- D. Batch transform

ANSWER:

C

Asynchronous inference

CONFIDENCE: high

=====

QUESTION 9

=====

QUESTION:

A company wants to create a chatbot by using a foundation model (FM) on Amazon Bedrock. The FM needs to access encrypted data that is stored in an Amazon S3 bucket. The data is encrypted with Amazon S3 managed keys (SSE-S3). The FM encounters a failure when attempting to access the S3 bucket data.

Which solution will meet these requirements?

OPTIONS:

- A. Ensure that the role that Amazon Bedrock assumes has permission to decrypt data with the correct encryption key.
- B. Set the access permissions for the S3 buckets to allow public access to enable access over the internet.
- C. Use prompt engineering techniques to tell the model to look for information in Amazon S3.
- D. Ensure that the S3 data does not contain sensitive information.

ANSWER:

A

Ensure that the role that Amazon Bedrock assumes has permission to decrypt data with the correct encryption key.

CONFIDENCE: medium

QUESTION 44

=====

QUESTION:

A company is developing a new model to predict the prices of specific items. The model performed well on the training dataset. When the company deployed the model to production, the model's performance decreased significantly. What should the company do to mitigate this problem?

OPTIONS:

- A. Reduce the volume of data that is used in training.
- B. Add hyperparameters to the model.
- C. Increase the volume of data that is used in training.
- D. Increase the model training time.

ANSWER:

C

Increase the volume of data that is used in training.

CONFIDENCE: high

QUESTION 46

=====

QUESTION:

A company wants to use large language models (LLMs) with Amazon Bedrock to develop a chat interface for the company's product manuals. The manuals are stored as PDF files.

Which solution meets these requirements MOST cost-effectively?

OPTIONS:

- A. Use prompt engineering to add one PDF file as context to the user prompt when the prompt is submitted to Amazon Bedrock.
- B. Use prompt engineering to add all the PDF files as context to the user prompt when the prompt is submitted to Amazon Bedrock.
- C. Use all the PDF documents to fine-tune a model with Amazon Bedrock. Use the fine-tuned model to process user prompts.
- D. Upload PDF documents to an Amazon Bedrock knowledge base. Use the knowledge base to provide context when users submit prompts to Amazon Bedrock.

ANSWER:

D

Upload PDF documents to an Amazon Bedrock knowledge base. Use the knowledge base to provide context when users submit prompts to Amazon Bedrock.

QUESTION 49

=====

QUESTION:

A loan company is building a generative AI-based solution to offer new applicants discounts based on specific business criteria. The company wants to build and use an AI model responsibly to minimize bias that could negatively affect some customers. Which actions should the company take to meet these requirements? (Choose two.)

OPTIONS:

- A. Detect imbalances or disparities in the data.
- B. Ensure that the model runs frequently.
- C. Evaluate the model's behavior so that the company can provide transparency to stakeholders.

- D. Use the Recall-Oriented Understudy for Gisting Evaluation (ROUGE) technique to ensure that the model is 100% accurate.
- E. Ensure that the model's inference time is within the accepted limits.

ANSWER:

AC

Detect imbalances or disparities in the data.
Evaluate the model's behavior so that the company can provide transparency to stakeholders.

QUESTION 82

=====

QUESTION:

What are tokens in the context of generative AI models?

OPTIONS:

- A. Tokens are the basic units of input and output that a generative AI model operates on, representing words, subwords, or other linguistic units.
- B. Tokens are the mathematical representations of words or concepts used in generative AI models.
- C. Tokens are the pre-trained weights of a generative AI model that are fine-tuned for specific tasks.
- D. Tokens are the specific prompts or instructions given to a generative AI model to generate output.

ANSWER:

A

Tokens are the basic units of input and output that a generative AI model operates on, representing words, subwords, or other linguistic units.

QUESTION 83

=====

QUESTION:

A company wants to assess the costs that are associated with using a large language model (LLM) to generate inferences. The company wants to use Amazon Bedrock to build generative AI applications. Which factor will drive the inference costs?

OPTIONS:

- A. Number of tokens consumed
- B. Temperature value
- C. Amount of data used to train the LLM
- D. Total training time

ANSWER:

A

Number of tokens consumed

QUESTION 127

=====

QUESTION:

An ecommerce company wants to improve search engine recommendations by customizing the results for each user of the company's ecommerce platform.

Which AWS service meets these requirements?

OPTIONS:

- A. Amazon Personalize
- B. Amazon Kendra
- C. Amazon Rekognition
- D. Amazon Transcribe

ANSWER:

A

Amazon Personalize

CONFIDENCE: medium

QUESTION 128

=====

QUESTION:

A hospital is developing an AI system to assist doctors in diagnosing diseases based on patient records and medical images. To comply with regulations, the sensitive patient data must not leave the country the data is located in.

Which data governance strategy will ensure compliance and protect patient privacy?

OPTIONS:

- A. Data residency
- B. Data quality
- C. Data discoverability
- D. Data enrichment

ANSWER:

A

Data residency

QUESTION 174

=====

QUESTION:

A company deployed a Retrieval Augmented Generation (RAG) application on Amazon Bedrock that gathers financial news to distribute in daily newsletters. Users have recently reported politically influenced ideas in the newsletters.

Which Amazon Bedrock guardrail can identify and filter this content?

OPTIONS:

- A. Word filters
- B. Denied topics
- C. Sensitive information filters
- D. Content filters

ANSWER:

B

Denied topics

CONFIDENCE: low

QUESTION 175

=====

QUESTION:

A financial company is developing a fraud detection system that flags potential fraud cases in credit card transactions. Employees will evaluate the flagged fraud cases. The company wants to minimize the amount of time the employees spend reviewing flagged fraud cases that are not actually fraudulent.

Which evaluation metric meets these requirements?

OPTIONS:

- A. Recall
- B. Accuracy
- C. Precision
- D. Lift chart

ANSWER:

C

Precision

CONFIDENCE: low

QUESTION 176

=====

QUESTION:

A company designed an AI-powered agent to answer customer inquiries based on product manuals.

Which strategy can improve customer confidence levels in the AI-powered agent's responses?

OPTIONS:

- A. Writing the confidence level in the response
- B. Including referenced product manual links in the response
- C. Designing an agent avatar that looks like a computer
- D. Training the agent to respond in the company's language style

ANSWER:

B

Including referenced product manual links in the response

QUESTION 178

=====

QUESTION:

Which statement presents an advantage of using Retrieval Augmented Generation (RAG) for natural language processing (NLP) tasks?

OPTIONS:

- A. RAG can use external knowledge sources to generate more accurate and informative responses.
- B. RAG is designed to improve the speed of language model training.
- C. RAG is primarily used for speech recognition tasks.
- D. RAG is a technique for data augmentation in computer vision tasks.

ANSWER:

A

RAG can use external knowledge sources to generate more accurate and informative responses.

QUESTION 179
=====

QUESTION:

A company has created a custom model by fine-tuning an existing large language model (LLM) from Amazon Bedrock. The company wants to deploy the model to production and use the model to handle a steady rate of requests each minute.

Which solution meets these requirements MOST cost-effectively?

OPTIONS:

- A. Deploy the model by using an Amazon EC2 compute optimized instance.
- B. Use the model with on-demand throughput on Amazon Bedrock.
- C. Store the model in Amazon S3 and host the model by using AWS Lambda.
- D. Purchase Provisioned Throughput for the model on Amazon Bedrock.

ANSWER:

D

Purchase Provisioned Throughput for the model on Amazon Bedrock.

QUESTION 181

=====

QUESTION:

A company is creating an agent for its application by using Amazon Bedrock Agents. The agent is performing well, but the company wants to improve the agent's accuracy by providing some specific examples.

Which solution meets these requirements?

OPTIONS:

- A. Modify the advanced prompts for the agent to include the examples.
- B. Create a guardrail for the agent that includes the examples.
- C. Use Amazon SageMaker Ground Truth to label the examples.
- D. Run a script in AWS Lambda that adds the examples to the training dataset.

ANSWER:

A

Modify the advanced prompts for the agent to include the examples.

QUESTION 223

=====

QUESTION:

A company has set up a translation tool to help its customer service team handle issues from customers around the world. The company wants to evaluate the performance of the translation tool. The company sets up a parallel data process that compares the responses from the tool to responses from actual humans. Both sets of responses are generated on the same set of documents.

Which strategy should the company use to evaluate the translation tool?

OPTIONS:

- A. Use the Bilingual Evaluation Understudy (BLEU) score to estimate the absolute translation quality of the two methods.
- B. Use the Bilingual Evaluation Understudy (BLEU) score to estimate the relative translation quality of the two methods.
- C. Use the BERTScore to estimate the absolute translation quality of the two methods.
- D. Use the BERTScore to estimate the relative translation quality of the two methods.

ANSWER:

B

Use the Bilingual Evaluation Understudy (BLEU) score to estimate the relative translation quality of the two methods.

QUESTION 269

=====

QUESTION:

A company is monitoring a predictive model by using Amazon SageMaker Model Monitor. The company notices data drift beyond a defined threshold. The company wants to mitigate a potentially adverse impact on the predictive model.

Which solution will meet these requirements?

OPTIONS:

- A. Restart the SageMaker AI endpoint.
- B. Adjust the monitoring sensitivity.
- C. Re-train the model with fresh data.
- D. Set up experiments tracking.

ANSWER:

C

Re-train the model with fresh data.

CONFIDENCE: low

QUESTION 270

=====

QUESTION:

A financial company uses a generative AI model to assign credit limits to new customers. The company wants to make the decision-making process of the model more transparent to its customers.

Which solution meets these requirements?

OPTIONS:

- A. Use a rule-based system instead of an ML model.
- B. Apply explainable AI techniques to show customers which factors influenced the model's decision.
- C. Develop an interactive UI for customers and provide clear technical explanations about the system.
- D. Increase the accuracy of the model to reduce the need for transparency.

ANSWER:

B

Apply explainable AI techniques to show customers which factors influenced the model's decision.

CONFIDENCE: low

QUESTION 271

=====

QUESTION:

A company deployed a model to production. After 4 months, the model inference quality degraded. The company wants to receive a notification if the model inference quality degrades. The company also wants to ensure that the problem does not happen again.

Which solution will meet these requirements?

OPTIONS:

- A. Retrain the model. Monitor model drift by using Amazon SageMaker Clarify.
- B. Retrain the model. Monitor model drift by using Amazon SageMaker Model Monitor.
- C. Build a new model. Monitor model drift by using Amazon SageMaker Feature Store.
- D. Build a new model. Monitor model drift by using Amazon SageMaker JumpStart.

ANSWER:

B

Retrain the model. Monitor model drift by using Amazon SageMaker Model Monitor.

CONFIDENCE: low

QUESTION 320

=====

QUESTION:

A company stores customer personally identifiable information (PII) data. The company must store the PII data within the company's AWS Region.

Which aspect of governance does this describe?

OPTIONS:

- A. Data mining
- B. Data residency
- C. Pre-training bias
- D. Geolocation routing

ANSWER:

B

Data residency

QUESTION 321

=====

QUESTION:

A company wants to implement a generative AI solution to improve its marketing operations. The company wants to increase its revenue in the next 6 months.

Which approach will meet these requirements?

OPTIONS:

- A. Immediately start training a custom FM by using the company's existing data.
- B. Conduct stakeholder interviews to refine use cases and set measurable goals.
- C. Implement a prebuilt AI assistant solution and measure its impact on customer satisfaction.
- D. Analyze industry AI implementations and replicate the most successful features.

ANSWER:

B

Conduct stakeholder interviews to refine use cases and set measurable goals.

QUESTION 323

=====

QUESTION:

A company is using Amazon Bedrock to build an AI assistant. The AI assistant helps customers find relevant products by making suggestions. However, the AI assistant's responses are often generic and irrelevant. The company wants to use prompt engineering to improve the AI assistant's responses.

Which solution will meet these requirements?

OPTIONS:

- A. Use few-shot prompting to add domain-specific context and explicit instructions.
- B. Use chain-of-thought prompting with hidden reasoning steps to ignore explicit domain instructions.
- C. Modify the AI assistant's conversational style to use more formal language and include technical product specifications.
- D. Use zero-shot prompting to augment retrieval from a product database.

ANSWER:

A

Use few-shot prompting to add domain-specific context and explicit instructions.

QUESTION 388

=====

QUESTION:

A financial company is training a generative AI model to predict outcomes of loan applications. The training dataset is small. The dataset categorizes loan applicants as "younger-aged," "middle-aged," or "older-aged." Most individuals in the dataset are characterized as "middle-aged."

The company removes the age range feature from the training dataset.

Which model behavior will likely happen as a result of this change to the dataset?

OPTIONS:

- A. The model will inaccurately predict outcomes for younger and older age groups.
- B. The model will require less training data.
- C. The model will predict accurate outcomes for only younger age groups.
- D. The model will accurately predict outcomes for all ages.

ANSWER:

A

The model will inaccurately predict outcomes for younger and older age groups.

QUESTION 419

QUESTION:

A financial company uses an ML model to detect potentially fraudulent transactions. The company needs to ensure that some types of predictions receive review by human analysts before the company acts upon the predictions.

Which AWS solution will meet this requirement?

OPTIONS:

- A. Amazon SageMaker Clarify
- B. Amazon SageMaker Ground Truth
- C. Amazon Augmented AI (Amazon A2I)
- D. Amazon SageMaker Model Monitor

ANSWER:

C

Amazon Augmented AI (Amazon A2I)

CONFIDENCE: low

QUESTION 422

=====

QUESTION:

A company is building a large language model (LLM)-based AI assistant to support service agents by automatically managing customer inquiries. The company wants to reduce the effort that customer service agents require during support calls.

The company needs to select a metric to evaluate the AI assistant against one of the company's business objectives.

Which metric will meet these requirements?

OPTIONS:

- A. Website engagement rate
- B. Average call duration
- C. Agent attrition rate
- D. First contact resolution rate

ANSWER:

B

Average call duration

CONFIDENCE: low
